

Product / Model: **RAILWAY / TM 234**  
Operating Entity: **Schweizer Bundesbahn (SBB)**

## MEETING THE HIGHEST QUALITY REQUIREMENTS FOR SWISS RAIL

The constant modernisation of the railway network, and especially the North-South Transversal rail project, has the highest priority in Switzerland. Through the wide support for the country's transport policy consistent investment is taking place in construction and maintenance vehicles for the Swiss Federal Railways SBB. SBB's construction services have been provided with 100 TM 234 vehicles. These machines carry out a wide range of jobs, including hauling equipment and material wagons to or at the construction sites.

All 100 vehicles are fitted with PALFINGER Type PK 9001 cranes. The equipment includes a radio remote control system as well as several grabs and rotators, considerably expanding the range of work performed by the universal vehicle.
